Career Objectives

- To become an accomplished doctor with proven records of good qualifications and performance
- Seeking an opportunity to observe how the NHS programs work

Professional Background and Job Description

I started taking part as a volunteer medical doctor in 2012 at Brahmaso Humanitarian Aid Organisation - a non-governmental organisation providing free health care services including GP clinics, Elderly Day Care, Haemodialysis, Eye clinics. Firstly, I was assigned in GP clinic as a junior doctor. Our team (my senior doctors and I) conducted physical examinations of patients, created treatment plans and gave general health advices, prescribed medications, explained test results and medical procedures to patients and consulted with other doctors about the specialised needs of some patients.

In December 2014, I started working as a medical officer at Mandalay Hospital - a private hospital with 120 beds and still expanding. My official duty hour is 216 hours per month with 12 hours shift. I was assigned in obstetrics and gynaecology ward as a junior doctor and trained under supervision of Professor Hla Hla Yi (OG) for 2 years. I conducted the following under her supervision:

- History taking, examinations and ordering blood tests,
- Providing prenatal care,
- Assisting in childbirth and in surgeries
- Performing CTG, hysterosalpingography
- Participating in monthly CME programs

I was transferred to medical ward and promoted as a senior medical officer in 2016 and trained under the supervision of Professor Tin Maung Han (Internal Medicine). I had conducted the following:

- Assisted in OPD clinic (70-80 patients per day)
- History taking, examination, ordering blood tests,
- Prescribing medications, explaining patients about procedures and test results
- Attending the ward rounds, case discussion and work-up
- Performing bedside procedures such as ABGs, VBGs, venesection, pleural fluid aspiration, paracentesis, catheterisation, nasogastric tube insertion
- On-call duties and proper handover with SBAR
- Updated guideline readings and PowerPoint presentations of medical cases
- Participating in weekly CME programs

Since 2017, I have been co-assigned as a senior medical officer in Medical Oncology Department and have been working under the guidance of Dr Ei Zin Myint (Oncologist)

- Assisting in Oncology OPD clinic (20-30 patients per day)
- Emergency management of critically ill patients and management of palliative care
- History taking, examination and ordering blood tests
- Providing treatments and discussing treatment options and outcomes to patients and their families
- Daily ward rounds (morning and evening rounds)
- Supporting patients and overseeing their care, including after-treatment care
- Elective admissions/ day care for chemotherapy
- Teleconsultation with patients

From 2016 to up to July 2023, as a senior medical officer for medical on-call Rota in medical team (medical ward and oncology ward), my main responsibilities are as follow:

- Identifying and diagnosing conditions
- Recommending the appropriate treatments
- Refer patients for more specialist treatment
- Collaborate with other doctors and emergency staffs
- Relay complex information clearly and concisely to patients
- Taking role of team leader in Code Blue team.
- Giving training for junior doctors

Personal Statement

As a medical officer with 11 years of work experience, I am eager to further enhance my skills and knowledge by immersing myself in the renowned healthcare system of NHS. Throughout my career, I have had the privilege of working in various medical settings including clinics, hospital and community health centre. These experiences have provided me with a solid foundation in patient care, diagnosis, treatment planning and medical procedures. However, I believe that participating in the clinical attachment program at the NHS will offer me invaluable opportunities to expand my expertise and gain exposure to advanced medical practices. I am sure this could be an important milestone in my road to be a qualified physician.

One of the main reasons I am drawn to the NHS is its reputation for excellence in healthcare delivery. The NHS is known for its commitment to the highest standards of excellence and professionalism. By participating in this program, I hope to learn from experienced clinicians and educators who are at the forefront of medical advancements. This exposure will not only enhance my clinical skills but also enable me to become a more effective leader and advocate for patient-centred care.

Furthermore, I am particularly interested in the diverse patient population served by NHS. The opportunity to work with patients from different cultural backgrounds and with varying healthcare needs will undoubtedly enrich my understanding of global health issues and improve my ability to provide culturally sensitive care. I strongly believe that this experience will make me more compassionate healthcare professional.

Lastly, I possess excellent communication and interpersonal skills which I believe are essential for effective patient care. I have experience working in multidisciplinary teams, collaborating with colleagues from various healthcare professions to ensure comprehensive and holistic care for patients. I am eager to learn from the diverse healthcare professionals within the NHS and contribute my own expertise to the team.

In conclusion, I would be highly appreciated it if I would have the opportunity of participating as a medical attachment role in upcoming December in one of the medical specialities or general medical department in your trust. And I am confident that this would be greatly helpful for me when I start practicing as a junior doctor in NHS.

Thank you for your time reading my application and for your kind consideration.

Yours sincerely,
Wai Phu Pwint Hlaing
